BOUNCE

remix any song on your phone

Creative tools blur the lines between a creator and a consumer

TEXT	PHOTOS	VIDEO	MUSIC
anybody can share their thoughts	anybody can share a photo	anybody can create a video	??? anybody can create a song

Similar to text, photo, and video - music is a participatory medium that enables self-expression.
But music creation is still not easy.

Current music creation/ remixing tools aren't built for everyone.

takes 6 months to learn
and costs betn $300-$800

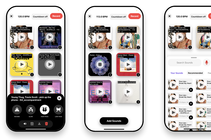
most people give up
before making their
first track

Bounce makes remixing dead simple.

INTERNET IS YOUR LIBRARY
Bounce let's you upload any sound from anywhere. Be it a youtube video, screen recording or your own voice from your phone's microphone.

MIX ANYTHING
Bounce lets you combine multiple sounds simultaneously. All sounds are automatically beat matched so they sound good together.

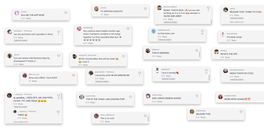
LAYER EFFECTS
You can easily layer effects on top of your sounds in real-time. Isolate between vocals and instrumentals or find the perfect loop within a song.



Bounce gets better everytime a new song is made

Every sound uploaded to Bounce gets added to a global sound library that can be accessed by other creators (w their permission) - this creates a unique content catalogue of sounds that can't be found anywhere else. This results in strong content based network effects.

Creators on TikTok are already begging us to release this.



most of them are currently hacking
video editing tools to make their
own remixes of popular song.

Becoming the De-facto tool for the next generation of audio and music creators
